

BUSINESS MANAGEMENT

# OUR SOCIAL RESPONSIBILITY

Corporate Social Responsibility responds to a process of continuous improvement.

It is an integral management model that incorporates our decisions and their impact, as well as the activities we carry out that **affect society and the environment, to act for** mutual benefit.

It is a voluntary commitment we make to contribute to sustainable development and to strengthen the ESG performance of our environment, beyond compliance with legal requirements.

# OUR SUSTAINABILITY POLICIES

We commit to operating on the basis of a socio-environmental management system that permeates our business model, ensuring due diligence and social, legal, and environmental compliance.

We develop activities that have a positive impact on environmental, social, and governance (ESG) issues, with ethical practices focused on the care, protection, and restoration of the environment, contributing to and promoting the development of local communities.

Starting with sustainable design and architecture, the preservation of natural spaces, flora, fauna, and social bonding are guiding principles that help materialize a space of connection and co-creation, fostering a fuller life between people and nature.
